

ARCHITECTURAL VISUALISATION

Your home, seen in full before a single brick is laid.

Photoreal CGI, 3D visualisation and technical design for homeowners planning extensions, refurbishments and new homes.

INTRODUCTION

Design decisions, made with confidence.

TP Evans is an architectural practice working with homeowners across Kent and the South East.

Before we submit a drawing or a foundation is dug, we show you exactly how your project will look and feel.

Our photorealistic CGI turns plans into images anyone can read at a glance — helping you refine materials, secure planning approval, and picture the finished result long before it is built.

CONSULTATION

SPRINGFIELD, OXTED — REAR ELEVATION, DUSK CGI

Six ways we bring a project to life.

A complete visualisation and technical service — from the first concept image to fully detailed construction drawings.

01

Exterior CGI

Photoreal street, garden and elevation views of your home in its real setting.

02

Interior CGI

Kitchens, living spaces and extensions shown with true light, materials and furniture.

03

Aerial & axonometric

Bird's-eye and cut-away views that explain layout, massing and site.

04

Site & garden visuals

Landscaping, boundaries and outdoor space shown in full context.

05

Concept & planning

Clear, persuasive imagery to support and strengthen planning applications.

06

Technical drawings

Fully detailed plans, elevations and sections coordinated for build.

EXTERIOR CGI

Every angle, in natural light.

We render your home across viewpoints and times of day — so you can judge form, materials and how it sits within its surroundings before committing to build.

SPRINGFIELD, OXTED — NEW BUILD HOME

LOAMPITS, TONBRIDGE SIDE
EXTENSION

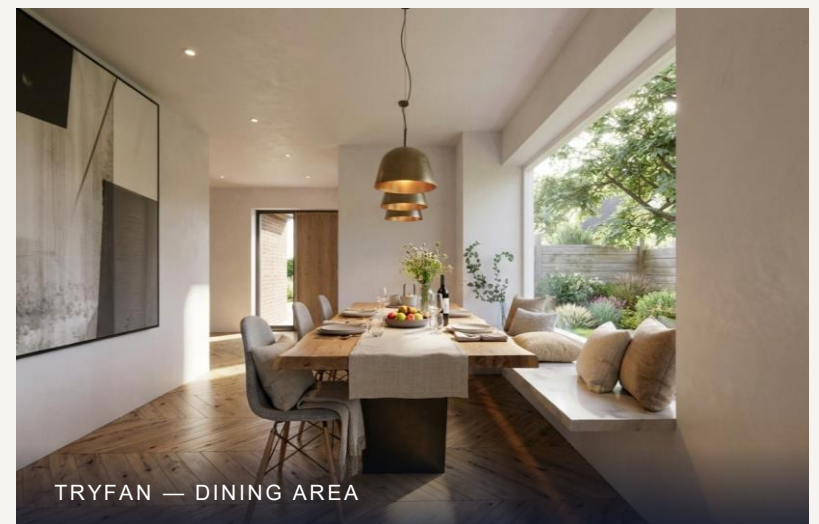

CORONA, LEIGH NEW APARTMENTS

INTERIOR CGI

Spaces you can feel before they exist.

Light, texture and proportion rendered exactly — the difference between a floor plan and standing in the room.

SCOPE & RANGE

From a single extension to an entire building.

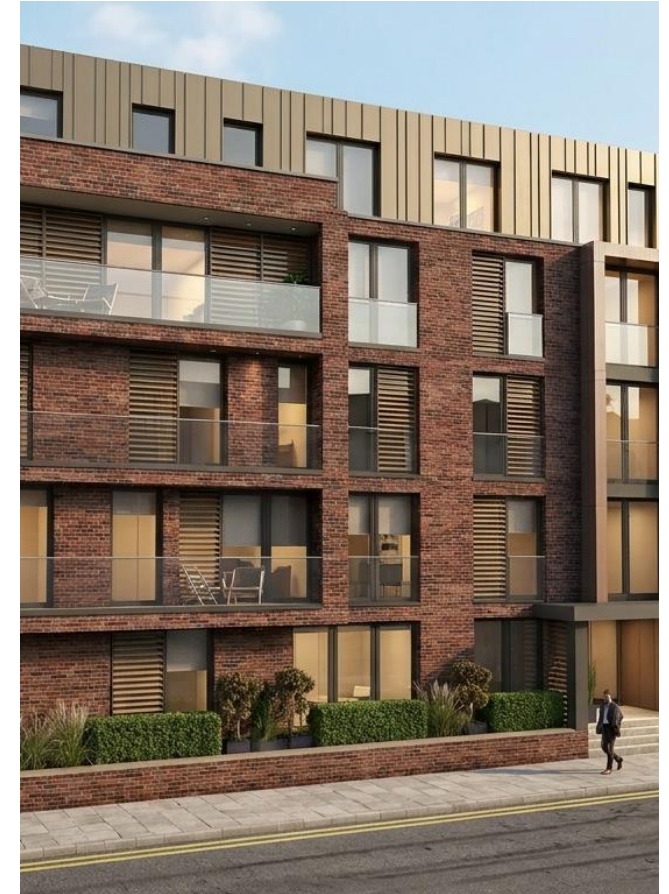

EXTENSIONS

Side and rear additions designed to sit naturally against the existing home.

CONSERVATION & HERITAGE

Sensitive interventions to period buildings within conservation areas.

NEW BUILDS & APARTMENTS

Larger residential and multi-unit schemes, from concept to marketing.

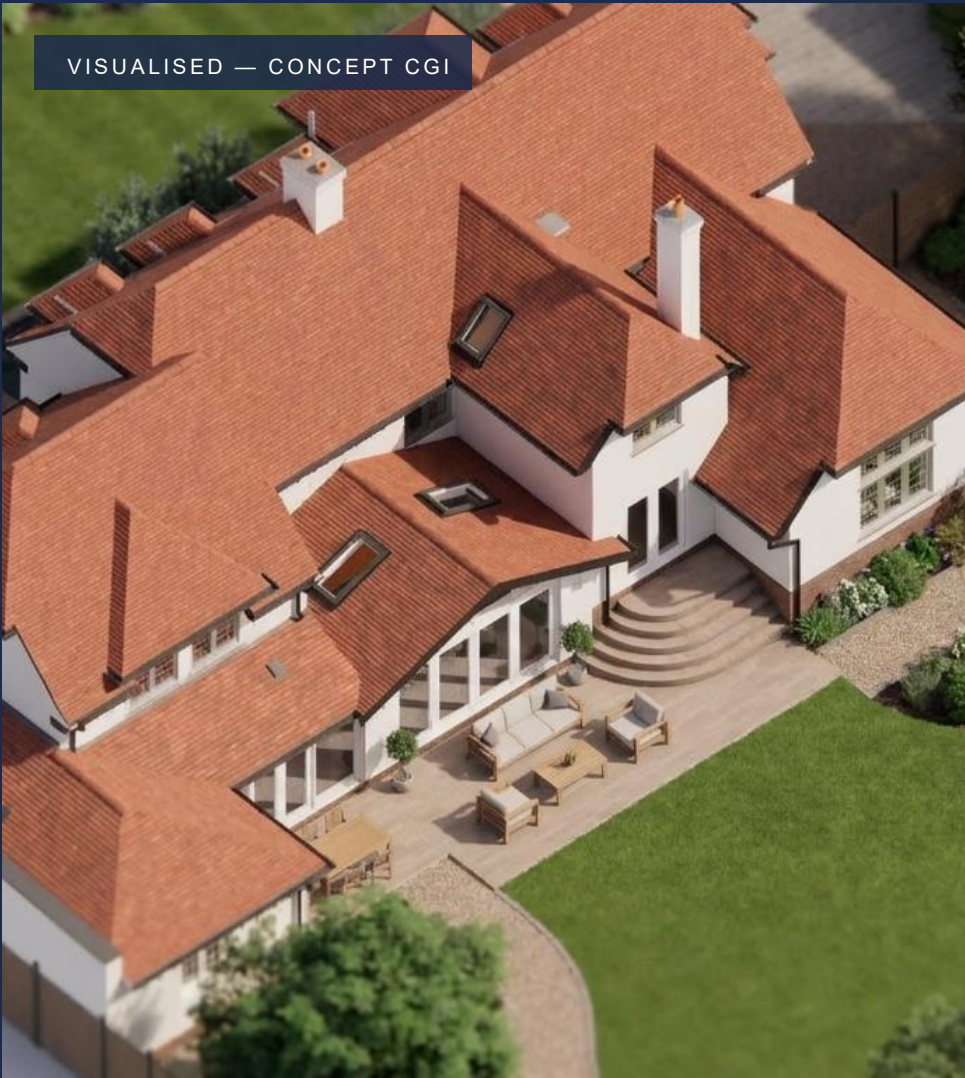

Whatever the scale, the same care goes into every image — helping clients and planners see the whole picture.

RENDER TO REALITY

The image becomes the building.

Because our visualisations are built from the same model as our drawings, what you approve is what you get.

VISUALISED — CONCEPT CGI

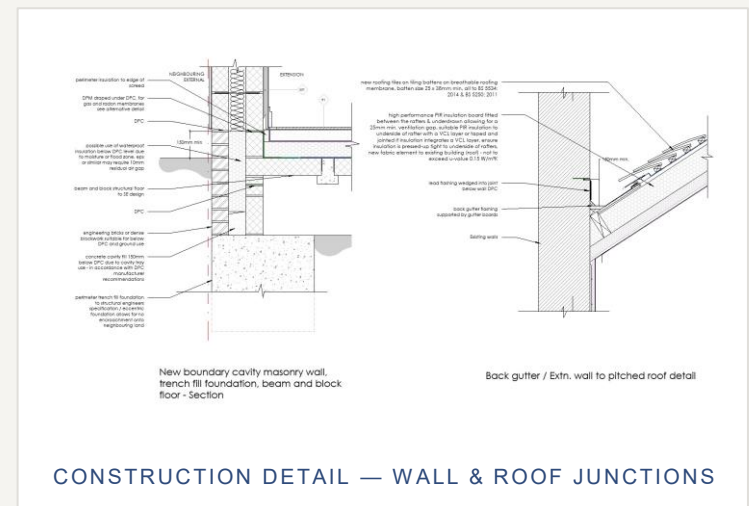

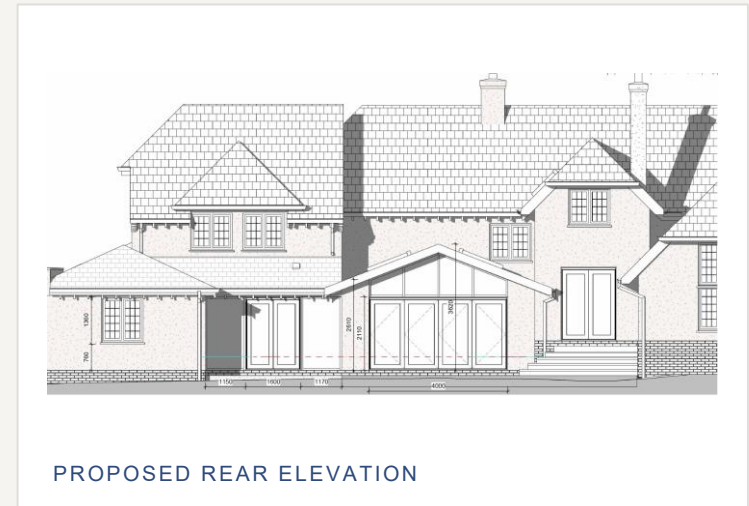

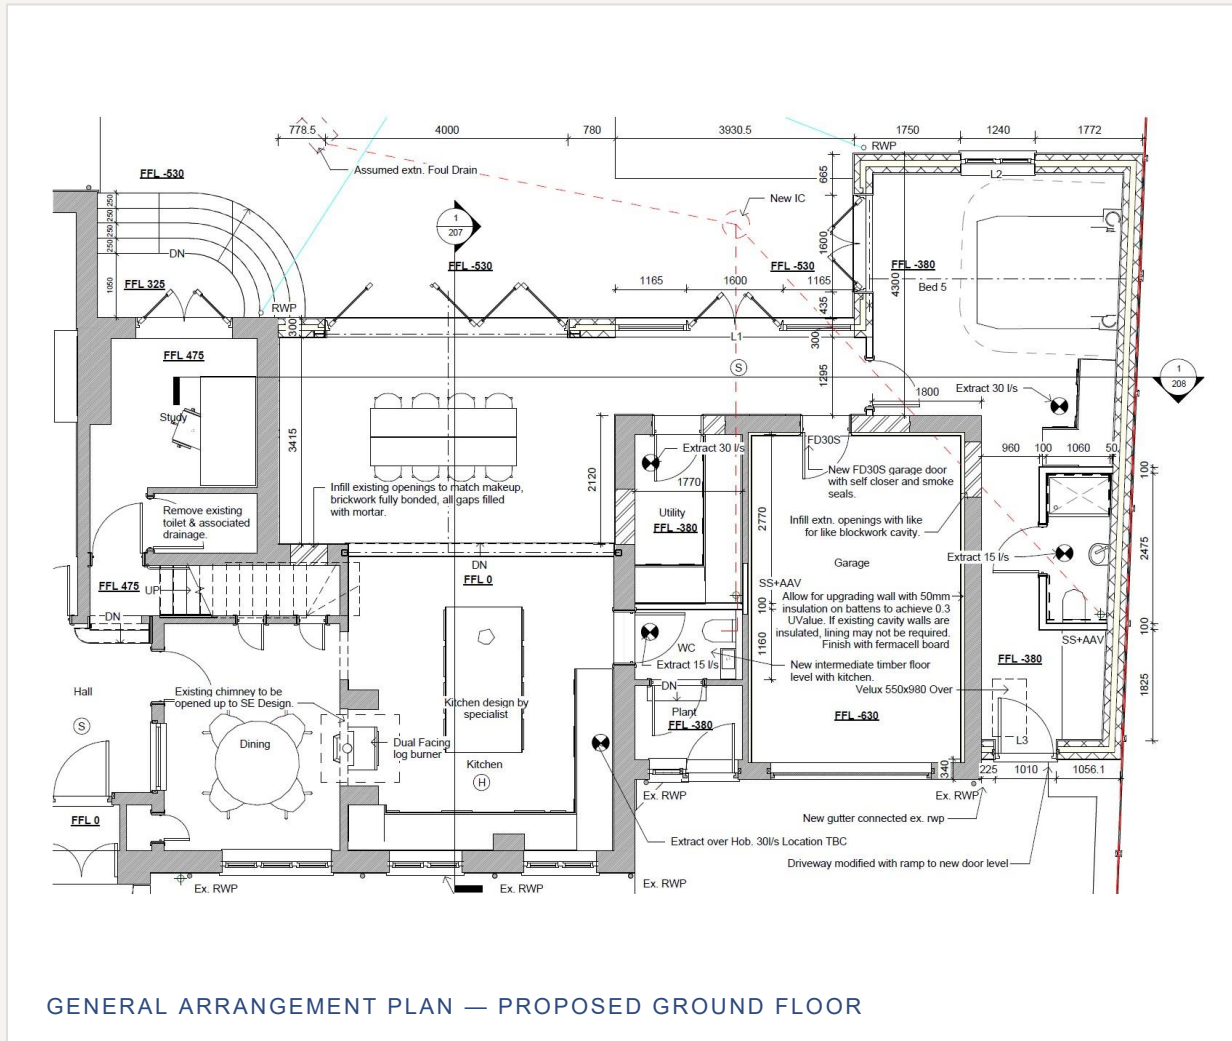

BUILT — COMPLETED HOME

COLDHARBOUR, TONBRIDGE — CONSERVATION EXTENSION & ANNEXE

Drawings built for approval and build.

The same 3D model behind our CGI produces fully coordinated construction information — planning drawings, building-regulations packages and specialist details.

FEATURED PROJECT

Springfield, Oxted

A characterful oak-framed family home, designed to sit comfortably within its established plot. We visualised the scheme inside and out — front and rear, day and dusk — so the clients could refine materials and detailing with complete clarity.

The same model carried straight through to fully detailed construction drawings, giving a seamless path from first concept to a home ready for site.

LOCATION

Oxted, Surrey

PROJECT TYPE

New build home

SCOPE

CGI + technical design

STATUS

In delivery

HOW WE WORK

A clear path from idea to home.

01

Consultation

Free, no-obligation first meeting.

02

Concept & CGI

Ideas visualised photoreally.

03

Planning

Application prepared & submitted.

04
